Lincoln Primary Care	1563 Sand Plant Road So. Charleston, WV 25309	8:00-6:00 M-F	304-756-1500

Take steps to protect your health:

Be aware of the effects of exposure to mold during the clean up process.

- Common reactions to mold are cough, congestion, runny nose, burning eyes, headaches, sneezing and sore throat.
- Children, pregnant women, older people and people with weakened immune systems may be more sensitive to mold than others.
- Signs of indoor mold growth include staining on surfaces, a musty odor, dark spots on or around vents, water stains and peeling or curling of vinyl floors or wallpaper.

Take mosquito bite precautions while conducting flood clean up.

- Remove flood-water debris on and around your property.
- Empty or drain potted plant bases, tires, buckets or containers, and roof gutters.
- Drain any pooled rainwater or floodwater that may have collected in containers around your property.
- Be sure to wear insect repellent.
- Wear long sleeves and pants while conducting flood clean up.
- Dispose of potential mosquito breeding sites by emptying stagnant pools of water around your house and yard, if possible.

Never use generators and charcoal or gas grills inside your home, basements, garages, or other enclosed spaces due to the risk of carbon monoxide poisoning.

- Residents should not operate these appliances near an open window or window air conditioner which may allow fumes to enter the home.
- The most common symptoms of CO poisoning are headache, dizziness, weakness, nausea, vomiting, chest pain, and altered mental status.

Use caution and be aware of the risk of chain saw injury during tree or debris removal.

- Wear a hard hat, safety glasses, ear plugs, thick work gloves, chaps, and boots.
- Trees entangled in power lines must be deferred to the local power company.

Take precautions while beginning clean up to reduce injury and illness.

- While working, keep hands away from mouth and face.
- Disinfect all wounds and dress them immediately.
- Wear protective clothing (rubber boots, rubber gloves and eye protection).
- Wash hands often using clean water and soap.

Check immunization status to ensure you are protected against tetanus.

- Tetanus is preventable by making sure a person is up to date on their tetanus immunization.
- This is done by getting a tetanus booster every 10 years.
- For persons with a wound that has been exposed to flood water, the recommended interval between doses of tetanus-containing vaccine should be shortened from 10 years to 5 years.

Use caution when using food following power outages or after being exposed to flood waters.

- All fresh fruits and vegetables, including home garden produce, should be destroyed.
- Foods such as cereals, bakery goods, dried fruits, flour, frozen foods, sugar, salt and similar foods in paper or plastic containers or wrapping should be destroyed.
- All meats, including fresh, dried, frozen and home canned should be destroyed.
